(2) Cite the authority for this DoD information system or electronic collection to collect, use, maintain and/or disseminate PII. (If multiple authorities are cited, provide all that apply.)

(a) Whenever possible, cite the specific provisions of the statute and/or EO that authorizes the operation of the system and the collection of PII.

(b) If a specific statute or EO does not exist, determine if an indirect statutory authority can be cited. An indirect authority may be cited if the authority requires the operation or administration of a program, the execution of which will require the collection and maintenance of a system of records.

(c) DoD Components can use their general statutory grants of authority ("internal housekeeping") as the primary authority. The requirement, directive, or instruction implementing the statute within the DoD Component should be identified.

g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The purpose of Automated Neuropsychological Assessment Metrics (ANAM) is to provide a computer-based test of human performance and neuropsychological functioning that will be used to assess the cognitive performance of all Active Duty, US Army Reserve, and Army National Guard Soldiers as they deploy and/or redeploy. It will also be used to follow a Traumatic Brain Injury (TBI) event. Ultimately, the Service Members will be tested as they enter the military to establish a baseline assessment. They will be tested on an annual basis as part of a routine medical examination. The Service Member's baseline ANAM scores allow providers to compare these results against military norms and identify Service Members requiring further medical evaluation. If the Service Member experiences an injury resulting in a TBI event or is exposed to other stressors that affect cognitive performance, the ANAM allows providers to assess the severity of the TBI and track the Service Member's recovery.

The following types of personnel information are collected on individuals: Name, Social Security Number, Birth Date, Gender, Status, Grade, Street Address, Contact Phone Numbers, Military Service Branch, Military Status, Military Grade, Operation, Unit of Assignment, and medical information.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

The privacy risks associated with the PII collected are unauthorized access, inaccurate information entered into the application, and unauthorized disclosure of PII. Administrative, physical, and technical safeguards are in place to mitigate these risks.
