g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Omnicell PandoraVIA™ is an analytics software application that delivers practical, usable tools for analyzing medication distribution throughout the Military Treatment Facility (MTF). Reports produced with PandoraVIA software help health care facilities with drug diversion prevention, regulatory compliance, and inventory optimization. Lost or diverted medications and the inability to properly manage medication and supply inventory contribute to increased costs and adversely affect patient care. PandoraVIA allows pharmacy personnel to quickly drill to the desired levels of information and the reports provide data that is recent and relevant.

The types of PII collected include name, social security number, and medical information.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

Risks include unauthorized access to PII and unauthorized disclosure of PII. These risks are addressed by the following:

- 1) PII data does not transit the network, but remains within the Military Treatment Facility (MTF) protected network enclave.
- 2) PII data at rest is encrypted.
- 3) Unauthorized access is mitigated by limiting the access to PII to trusted individuals only; these individuals have clearance and a "need to know" in order to access data.
- 4) External threats are mitigated by following Defense Information System Agency (DISA) provided checklists as part of the MTF's DoD Information Assurance Certification & Accreditation Package (DIACAP) as well as applying the appropriate DISA checklists to the PandoraVIA servers and workstations.
