

MNFI Soldier Well-being Sampling Plan Guidance

Survey approximately 2,000 Soldiers/Marines. We want to survey units so we get a representative sample of all the units in OIF. For example, if approximately 1/10th of the Soldiers are from National Guard units, we would like to get approximately 200 National Guard surveys. The only exception is that we would like to oversample (500 instead of representative 200) the Marine units so we can make meaningful comparisons to Army units.

Breakdown is as follows:

<u>Unit/Type of Unit</u>	<u>Number of Survey Requested</u>
Brigade Combat Teams (BCTs) 200 each from 6 BCTs spread throughout OIF including the one National Guard BCT	1,200
Marines (Oversampling) 200 per each regiment, (25 per each line company NO HHC personnel) 100 from division-level units	500
Corps-level units (include transportation units)	200
MNSTC	<u>100</u>
	TOTAL 2,000
